

Posi Quiet brake pads are manufactured using the same positive molding process used by Original Equipment suppliers. Positive molding uses extreme pressure to compress the friction material and bond it to the backing plate. This process assures consistent friction material density throughout the pad, resulting in even wear and performance characteristics throughout the life of the brake pad.

The number one cause for customer returns is noise and vibration. Centric Parts has recognized these issues and is constantly improving its products to eliminate them. Posi Quiet brake friction features either precision cut or shaved backing plates and mechanically attached shims; these small details ensure proper fitment in the caliper and virtually eliminate noise associated with pad vibration. Posi Quiet brake pads are available in three application specific compounds.

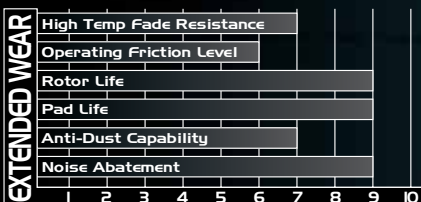

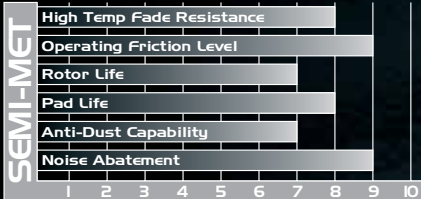

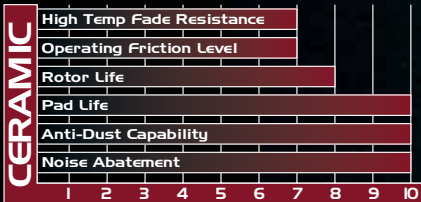

### Stop Tech Performance Brake Systems

StopTech, Centric's ultra performance division, is a leading innovator of world class brake components and systems for production-based racing cars and high performance vehicles on the street and track. StopTech was the first to offer balanced brake upgrades for production cars and remains the worldwide leader with over 650 platform offerings to dramatically improve overall braking performance.

Power Slot, Centric's performance division, focuses on entry level brake upgrade solutions and pioneered direct fit performance rotors for trucks, SUVs and severe duty vehicles.

# StopTech Street Performance Brake Pads

StopTech Street Performance Brake Pads are engineered to meet the demands of high performance driving while maintaining the refinement and comfort expected in everyday driving conditions. StopTech brake pads combine the benefits of premium street brake pads with aggressive friction formulas suitable for track day and autocross use. Para-aramid composites are specially formulated to provide linear response at both cold and hot temperatures, delivering optimum stopping performance over a wide range of driving conditions.

*High temperature pad compound ensures predictable performance in heavy service.*

*Positive mold manufacturing process assures uniform friction material density and performance characteristics throughout the life of the pad set, delivering even pad wear with consistent pedal feel and performance.*

*Application specific O.E.-style shims reduce or eliminate noise caused by pad vibration.*

*Precision-cut backing plates fit accurately in O.E. calipers.*

*Scorching raises the initial cold effectiveness, providing stable friction levels and consistent performance across the entire operating range.*

*Low-dust formulation is rotor-friendly and leaves wheels cleaner than many performance pads.*

StopTech and its parent company, Centric Parts, are technology and vehicle application leaders in the braking industry, a position underlined by repeated industry recognition, as well as professional race wins and championships. This unparalleled expertise is the result of an ongoing commitment and investment of resources. Teams of engineers continually develop new technology and products, as well as carrying out O.E. application identification, friction and other material testing and competitive benchmarking. An array of state-of-the-art measurement equipment, solid modeling and finite element analysis (FEA) software, an unmatched archive of O.E. part samples, multiple brake dynamometer test stands and on-vehicle data acquisition systems are applied with knowledge born of decades of brake system development. No matter how you define brake performance, Centric Parts has the right performance solution for your vehicle.

## System Solutions

SportStop and Power Slot rotors are a great first level performance upgrade for the original brake systems of cars and trucks, delivering winning performance.

Machined rotor surfaces provide:

- Increased initial "bite" response
- Improved wet weather response
- Enhanced open wheel appearance

They are available with slotted, cross-drilled, or drilled and slotted designs for more than 1200 vehicles. Competition-proven Power Alloy and directional vanes are standard for enhanced durability and brake cooling in selected applications.

## Stainless Steel Brake Lines

StopTech stainless steel brake lines for stock calipers are a significant upgrade to standard cars and trucks.

They consist of a Teflon® inner hose supported by a layer of woven stainless steel braid that is wrapped in a clear PVC plastic cover, providing added protection from debris and abrasion.

- Firmer pedal feel
- Shorter stopping distances though shortened "reaction time"
- More precise brake modulation
- StopTech stainless steel brake lines comply with TÜV requirements and United States Department of Transportation FMVSS106
